California Lutheran University
COVID-19 Response
Academic Building Preparation

July 02, 2020
Goal of Presentation

Present the Cal Lutheran Community with Information Regarding On-Going Physical Plant Modifications to Academic Buildings
Exterior Pedestrian Traffic

With the completion of the Swenson Science Center, the spine has been re-opened and the pedestrian bridge to Ahmanson has completed. This will result in fewer “pinch points” for pedestrians to come into contact.
Classroom buildings with interior corridors will have one-way path of travel identified with signage and instructions
• Upgrading to MERV 13 filters in all university HVAC systems in order to filter fine particles.
• Increasing outside air or partially opening windows in all classrooms.
• Increasing fresh air to Soiland Humanities Building classrooms.
Learning Space Seating – Social Distance and Planning

- Furniture has been configured so that students are spaced six feet apart.
- Tables are marked showing student seating location. Typical classrooms now seat approximately 50% of previous capacity.
- Will use larger events spaces for larger classrooms
- Adding clear acrylic barriers to instructor stations in smaller spaces
All surfaces, door handles, teacher stations and chairs will be disinfected by an approved EPA product each day.
Disinfecting wipes will be provided and restocked for each learning space.
Numerous “Healthy Hands” stations will be provided in each academic building.
Learning Space – Access and Notification

- All academic buildings will only be able to be accessed through card-swipe to limit individuals from outside the campus community.
- All academic buildings will have an emergency “beacon” in a public area to inform the community if there is an emergency.
Learning Spaces – Other Items

- All bathrooms are being provided with paper towel dispensers, and all hand dryers are being disconnected.
- All members of the campus community will be provided with face coverings.
- Face coverings must be worn while in classrooms.
